

then Grundmasse wegen merkwürdig. — $4\frac{3}{16}$ Loth. — 1808. 24. 9. — Durch die bei Mr. 2 erwähnte Kommission überbracht. 19. Sehr kleiner, ganzer, nur an einer Kante etwas ans gebrochener Stein, einer der kleinsten von diesem Steinfalle. Zeschrieben und abgebildet im angeführten Werke, S. 25, Taf. 5. Fig. 3. — Raum $\frac{5}{8}$ Loth. — ISOS. 25. I. — Durch das Kreisamt zu Iglau eingesendet. 20. Ein sehr kleiner, und, so viel bekannt, der kleinste, der bei Stannern gefallenen. Steine, vollkommen ganz, flach, fast linsenförmig. — Beschrieben und abyebildet im anyeführten Werke, S. 27, Taf. 5. Sig. $4. - \frac{7}{32}$ Loth. — 1808. 25. 2. Durch das Kreisamt zu Inlau eingesendet. 3. Bruchstücke. 21. Größeres Bruchstück mit Kinde, merkwürdig wegen der Seutlichen Aufscheibungen von Magnetkief, wovon eine erb sengroß ist. — Beschrieben und teilweise abgebildet in dem angeführten Werke, Seite 69, Taf. 7., untere Reihe, Mittel-Sigur. — $13\frac{7}{16}$ Loth. — ISOS. 24. IO. — Durch die bei Mr. 2 erwähnte Kommission überbracht. 22. Größeres Bruchstück mit Kinde und einer unvollkom men überrindeten Bruchfläche die Grundmasse teils grob, teils feinkörnig, grau. — $11\frac{1}{16}$ Lth. — I809. 4. 3. — Von Zerrn von Well gekauft. 46

def Stückef Var . I. $-30\frac{5}{8}$ Loth. -1842. I. 3. - Wie Var . I akquiriert. 3. Dicker Abschnitt, von zwei Seiten mit Kinde umgeben, mit zwei schmalen und einer breiten, polierten, dann einer größeren schön geätzten Schnittfläche. Auf einer der polierten flächen befindet sich eine sonderbare kleine längliche Söhlung. $5\frac{13}{16}$ Loth. — J838. 25. 8. Wie Vr. I akquiriert. 4. Kleines, an beiden Seiten schwach geätztes Plättchen. $\frac{7}{8}$ Loth. — 1838. 25. 9. Wie Ar . I akquiriert. 5. Rleines, blau und violett angelaufenes Plättchen mit Zeichnungen. — $\frac{5}{8}$ Loth. — I838. 25. IO. Wie Ar . I akqui» riert. Die Zerren Rivero und Bousingault haben sowohl in dem Meteoreisen von Santa Rosa in Columbien, das wir in der k. Berliner Mineralien-Sammlung zu sehen und hinsichtlich der heim Utzen sich zeigenden Siguren zu untersuchen Gelegenheit hatten, wobei ef sich wie Rasyatà verhält, als auch in diesen letzteren einen nicht unbeträchtlichen Untheil von Mickel gefunden. Wiederholte in Wien mit unserem Eisen von Rasyatà, das doch von den Zerrn Rivero und Bousingault herstammt, angestellte Versuche konnten darin keinen Mickel entdecken. Dieses merkwürdige Kisen verdiente wohl eine wiederholte genaue chemische Untersuchung. 5.89 Tucuman, 15 Meilen von Otumpa (daf nach einigen Ungaben im Bezirke, jetzt Staate, St. Jayo del Estero liegen soll) in 172
